fixes for current testing version create PR to UAT only (skip Dev) and
new feature PR to Dev only, thank you Everyone

or fixes PR to Dev and UAT separately, anyway don't get the whole Dev to UAT, we started new sprint and
changes will be pushed to Dev

Live Translation – when scrolling down to the bottom, the system should continue displaying the live
speech in real time instead of staying fixed on the latest sentence

星期三 下午 02:54

JASMINE MAI JIA YI AI-generated image of the correct sentence should be placed here to help students
answer and remember better

all the usage and spelling tasks should have AI-generated images here

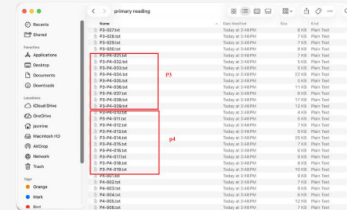

when the ari figure is clicked, flip the card and show the image

only when the ari figure is clicked should the image shows up

also can we add a AI coach like the existing one in reading app into the vocab app so as to explain why the
answer chosen is wrong or correct

when users reach the screen, pre-send request to AI (Assume user choose all four of the sentences) and
show the response after a choice has been made

(Attached 1)

Hi Ian, I found an inconvenient part in the platform I suggest for a modify. If you see (Attached 1) 08
role student name: Shun Hei Yip, it shows that he have "38 mins practice time in recite your script".
However, it does not show his score when simply generating the excel report. Instead, we will have to
click 'detail' in order to track his score for the "recite your script". Is there any way we could make it
more user friendly and easier when it comes to generating the report and showing the score?
