

IY

we can but a clear and reusable rule is needed; otherwise, the program may need to be modified with each import

for column I , as Jasmine has mentioned before, sometimes the target word is over-corrected --> wrong spellings are changed to correct spelling. in that case, the target word (in same spelling) will appear four times in column I.

to overcome this problem, can you add a rule to the importing process so that rows with the target word appearing four times or more in same spelling in column I would get skipped?

Kelvin do you think you write a script import to DB direct better ?

IAN XIE YING 2026/5/18 上午 12:11

6 May import result: "data":{"info":["Processed 15219 rows. Success 167. Failed 15052."]} reason: we currently only import these word list:...

So the new batch all fail ?

What's the current stage ?

KH

表名	情况简述
user_setting	只有配置列 + PRIMARY KEY (user_id) , 没有任何审计四字段
room_activity_log	事件流表: created_at + timestamp , 无四字段命名
user_device_session	created_at / updated_at , 无四字段命名
live_room_attendance	created_at / updated_at 、 updated_by , 无四字段命名 (updated_by 也不是 creator/updater 那种账号字符串)
ari_turn	仅有 create_time , 缺 update_time 、 creator 、 updater
ari_session	有 create_time 、 update_time , 缺 creator 、 updater
questionnaire_english_level_assessment	(表名多了一个 n) 有 create_time 、 update_time , 缺 creator 、 updater
group_discussion_speaker	只有 create_time , 缺其余三项
group_discussion_utterance	只有 create_time , 缺其余三项
group_discussion_speaker_mapping	有 create_time 、 update_time , 缺 creator 、 updater
group_discussion_safety_mark	有 create_time 、 update_time , 缺 creator 、 updater

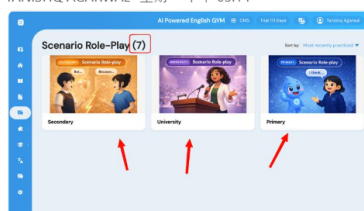

内容相关的数据都有, 有一些 user 相关的没有 creator/updater 但是不影响因为有关联 user_id 而且只有那个 user 才会写这个数据; 需要改的应该只有 userSettings 加 creator/updater/created_time/updated_at

HILTON LAM MAU HONG 2026/5/15 下午 08:49

KAH YANG JIA HAO 是不是所有table 都加了 created at created by , modified at and modified by TANISHQ AGARWAL
