1	I. Malaria threatens millions of people in SSA			
2	A. Malaria is responsible for millions of deaths in SSA (Lawson '05: 3 millions deaths/year)	1. Treatment of malaria is available and effective in SSA (Miller '05) 2. Most people in SSA have developed an immunity to malaria. (Snow '06)	1. If treatment is so effective, why are there still 3 million deaths from malaria each year? 2. Immunity doesn't help children, which is why malaria is the #1 killer of children in SSA	1. Treatment is being rapidly expanded; the number of deaths is decreasing 2. The Snow evidence said that there are few actual deaths from malaria
3	B. Malaria perpetuates poverty (Lawson '05) (WHO '06)	1. There are many causes of poverty. (Sachs '06) 2. The Lawson evidence says malaria causes only a 1.5% decline in GDP.	1. The fact that there are many causes of poverty doesn't mean we should ignore this cause of poverty. 2. The Lawson evidence says 1.5% PER YEAR, which means about a 15% decline over a decade.	1. The AFF now admits that they can't do anything about many causes of poverty; this means that poverty will be perpetuated even if this single cause is removed. 2. This is still a small amount each year.
4	II. SSA requires international assistance to prevent malaria			
5	A. Prevention is the best hope for eliminating malaria in SSA (Roberts '06) (Ataran '05)	1. Prevention and treatment should be pursued at the same time (Gellely '07) 2. Prevention is vigorously pursued at present. (Miller '05)	1. Treatment can never eliminate malaria, the fact that prevention has eliminated malaria in other countries shows there is hope. 2. Prevention can be increased.	1. Treatment can eliminate the DEATHS from malaria. 2. One can always increase anything, the point is that there is no inherency: Prevention is already extensively pursued.
6	B. Most SSA nations lack the capacity to prevent malaria on their own. (Coetze '06) (Webster '05)	Most SSA countries have their own programs for malaria prevention. (der Gaag '06)	These programs lag behind their potential because of lack of funding and support	Chemicals are inexpensive; Labor is the major issue & SSA countries have an abundant supply of labor
III. Present II C health assistance in

Example of flowing on the computer.

In the Excel example shown previously, you will notice that several cells contain numerous answers made to a single argument. You might wonder how this is done, considering that whenever you press Enter, Excel automatically moves you to the next cell. The answer is to hold down the Alt key when the Enter or Return key is pressed. By doing so, you can enter as many answers as you want within the same cell.

When flowing on paper, most debaters switch colors to show which team made the argument. If the column represents arguments made by the affirmative team, the ink color might be black. If the column represents arguments made by the negative team, the ink color might be red or blue. How can you do the same color variation in Excel? Follow these three steps: (1) Select the whole column by clicking the Column Letter at Top; (2) Select the Format menu option and then select Cells; and (3) Select the Font tab and choose the color you want.
