
CHAPTER CHECKLIST

- Critical thinking involves the disposition to reflect on the world and on our beliefs and to apply our reason to their examination.
 - Critical thinking is an attitude more than a set of particular skills.
 - For the debater, critical thinking requires the consideration not just of a statement or argument but also of the assumptions and intentions that underlie and are contained within it.
 - Common logical fallacies include: false dichotomy, correlation and causation, proof by repetition, fallacy of composition, oversimplification of cause, and moral high ground.
 - Debaters can apply critical thinking skills to wider life.
-
